

## CORRIGENDUM

### “VEGETATION IMPACT ON THE DUNE STABILITY AND FORMATION ON THE LITHUANIAN COAST OF THE BALTIC SEA”

(doi: 10.3846/16486897.2015.1009079)

Ramunė Urbonienė, Loreta Kelpšaitė and Ingrida Borisenko, authors of article *Vegetation impact on the dune stability and formation on the Lithuanian coast of the Baltic sea*, published in 29 Sep 2015, would like to make following correction of the fourth paragraph of the Conclusions on page 237.

“The projection coverage of vegetation has no significant impact to a single analysed morphometric parameter of the beach and the PBD – more exactly, the beach incline ( $R = 0.23$ ), which is directly affected by hydrological parameters.”
